

Curriculum Aspiration

Physical Development

Use large construction materials to build and play on an adventurous obstacle course or play structure that I have created

Milestone 1

Children move confidently in a range of ways, showing awareness of space and obstacles around them. They begin to explore large construction materials with support and use simple equipment safely with adult guidance.

Milestone 2

Children combine movements smoothly (e.g. climbing, jumping, balancing) and begin to move and position larger equipment with increasing independence, talking about their ideas. They start to create simple obstacle arrangements and take manageable risks, developing a growing awareness of safety.

Milestone 3

Children independently design and build obstacle courses or play structures using a range of large materials creatively and safely. They adapt and improve their designs through testing, working either collaboratively or independently with sustained focus.
